

FUTURE-PROOF

Meet tomorrow's requirements today with PCF data

PCF Reports: From raw material extraction to the factory gate – comprehensive, certified, tailor-made

The market is changing: customers want to know how their products are made – and what their carbon footprint is. With ANSMANN's PCF (Product Carbon Footprint) data, you can provide them with the answer – and demonstrate that we are a partner committed to transparency.

What is the Product Carbon Footprint?

The Product Carbon Footprint captures the product's CO₂ emissions from raw material extraction to the factory gate of ANSMANN AG at its site in Assamstadt, Germany (cradle-to-gate). We can also provide a PCF report for your customised products.

CO₂ emissions are calculated in collaboration with Telusio GmbH, our external partner, in accordance with the 'Greenhouse Gas Protocol – Product Life Cycle Accounting and Reporting Standard' (GHG Protocol) and ISO 14067. This ensures that our PCF analyses comply with internationally recognised standards and offer you the highest levels of transparency and reliability.

The benefits for you as an ANSMANN partner

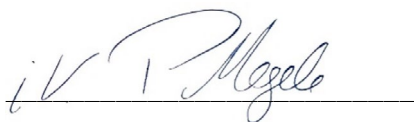

- **Competitive advantage:** By providing specific CO₂ data, you can position yourself as a sustainable partner and meet your customers' growing environmental requirements.
- **Individual PCF certificates:** We can also generate PCF reports using your company data, with ANSMANN AG remaining visible as the data source.

- **Transparent cost clarity:** On request, we can provide you with a PCF report covering the entire supply chain, from raw material extraction to your factory gates, for an additional charge.
- **Sustainable product design:** The PCF reports provided enable you to make informed decisions about more climate-friendly product design.
- **OEM service for bespoke products:** We also carry out the relevant PCF analyses for custom-designed products and support you in achieving your specific sustainability goals.
